

Marine and Offshore Applications

Oil Platform

Large Cargo Ship

Shipyard

Making the most effective design, planning, and safety decisions for tankers, cargo and passenger vessels, and offshore drilling platforms is critical. The hazards associated with such marine and offshore operations necessitate the use of specialized fire protection systems. The large capital investment in marine vessels and offshore gas exploration facilities, along with the international importance of the products involved, presents special challenges in establishing and maintaining an environment with fire and personal protection and safety.

Palmer-Asia Inc.'s Marine Department designs, supplies and installs Fire Suppression Systems for

- Machinery spaces
- Cargo holds
- Gas turbine enclosures
- Fuel preparation and generator area
- Electrical control and switchgear areas
- Control rooms
- Communications centers
- Bilge pump rooms
- Offshore platforms
